

IntelliJ创建JavaFX项目演练

北京理工大学计算机学院
金旭亮

创建一个JavaFX项目

The image shows the 'New Project' dialog in IntelliJ IDEA. On the left, a list of project types includes Java, Maven, Gradle, Android, IntelliJ Platform Plugin, JavaFX (highlighted), Java Enterprise, Spring Initializr, Quarkus, Micronaut, MicroProfile, Ktor, Groovy, and Grails App Forge. The main area contains fields for Name, Location, Language, Build system, Test framework, Group, Artifact, and Project SDK. Annotations in speech bubbles provide guidance: '本课程编程语言为Java' points to the Language field, '习惯上，选Maven' points to the Build system field, and '可以选JDK 17或19' points to the Project SDK dropdown.

New Project

Project Type: Java, Maven, Gradle, Android, IntelliJ Platform Plugin, **JavaFX**, Java Enterprise, Spring Initializr, Quarkus, Micronaut, MicroProfile, Ktor, Groovy, Grails App Forge

Name: HelloJavaFX

Location: C:\JavaProjects\HelloJavaFX

Language: Java, Kotlin, Groovy

Build system: Maven, Gradle

Test framework: JUnit, TestNG

Group: com.jinxuliang

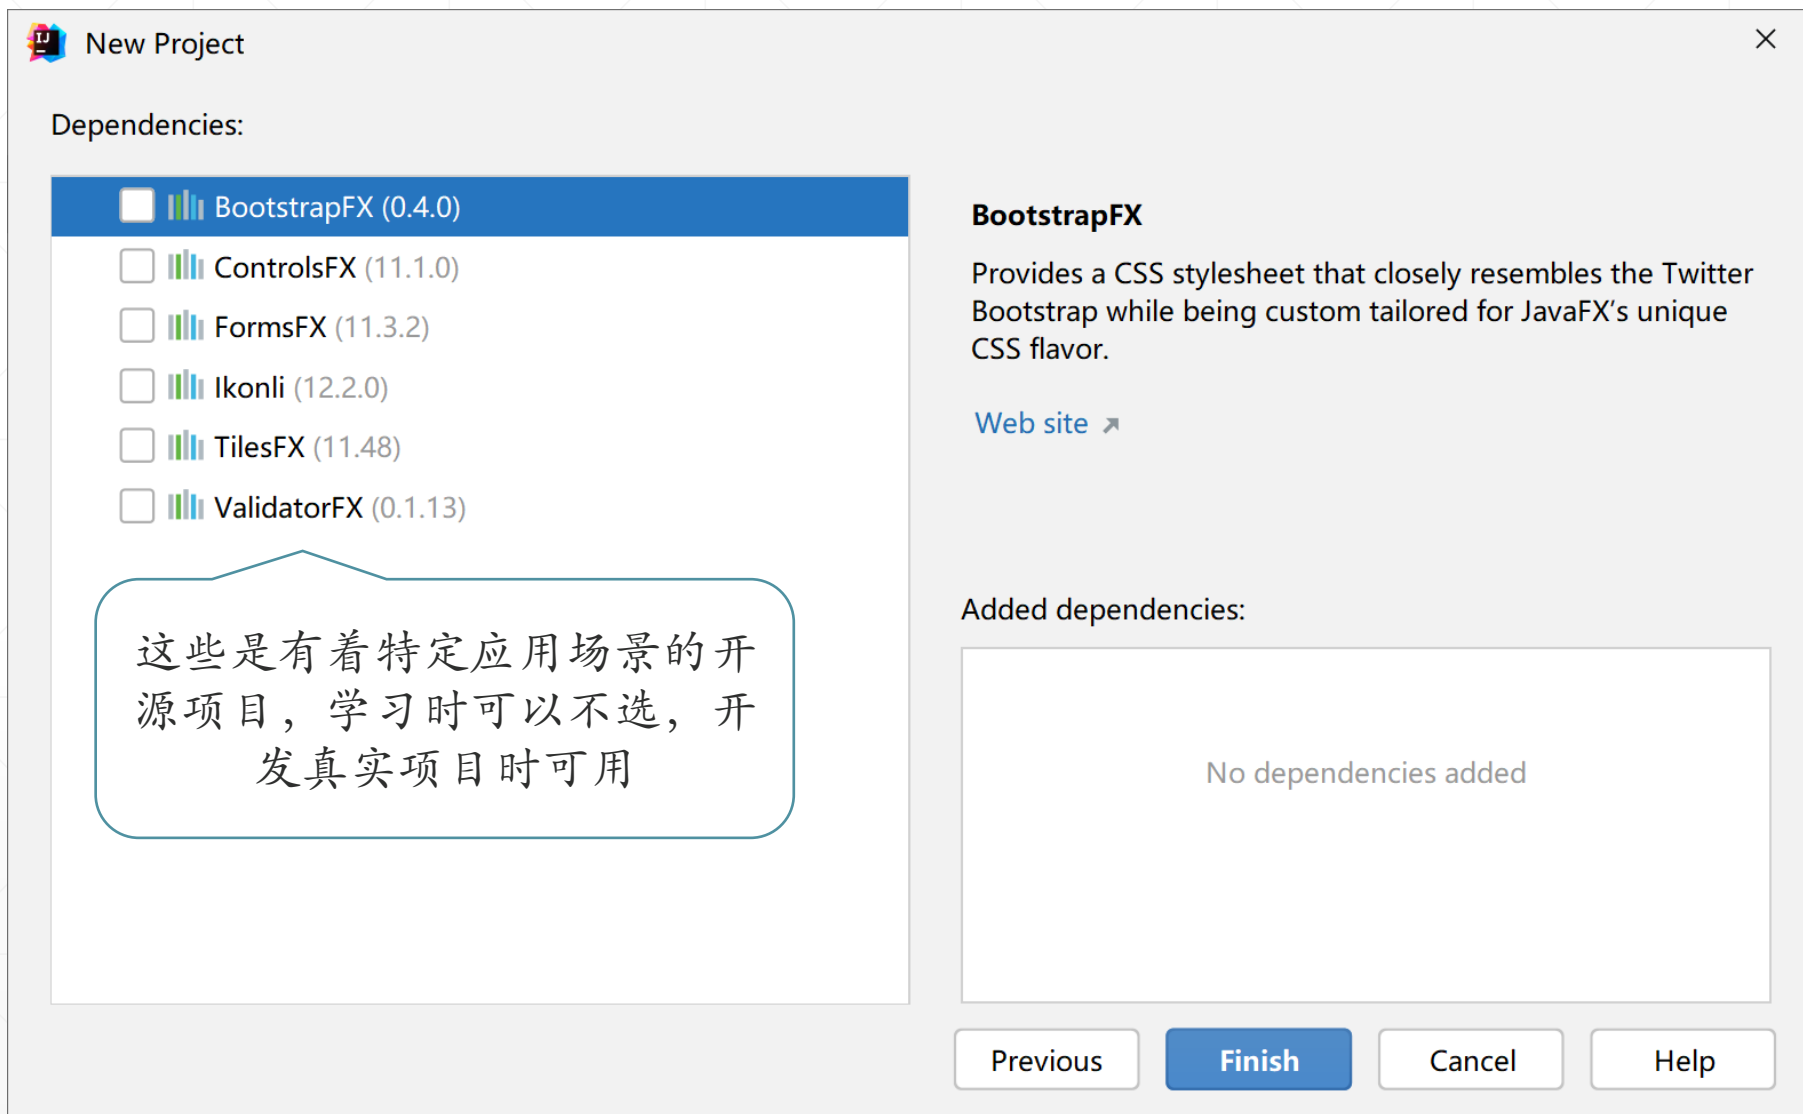

Artifact: HelloJavaFX

Project SDK: 17 java version "17"

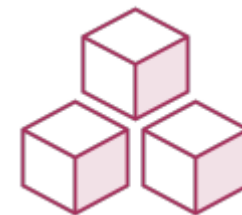

Buttons: Previous, Next, Cancel, Help

Annotations:

- 本课程编程语言为Java
- 习惯上，选Maven
- 可以选JDK 17或19

JavaFX相关依赖

IntelliJ会为JavaFX项目添加一个pom.xml文件，里面定义好了相关依赖，如果网络联通的话，IntelliJ会自动地下载相关的组件.....

```
<dependency>
  <groupId>org.openjfx</groupId>
  <artifactId>javafx-controls</artifactId>
  <version>19</version>
</dependency>
<dependency>
  <groupId>org.openjfx</groupId>
  <artifactId>javafx-fxml</artifactId>
  <version>19</version>
</dependency>
```

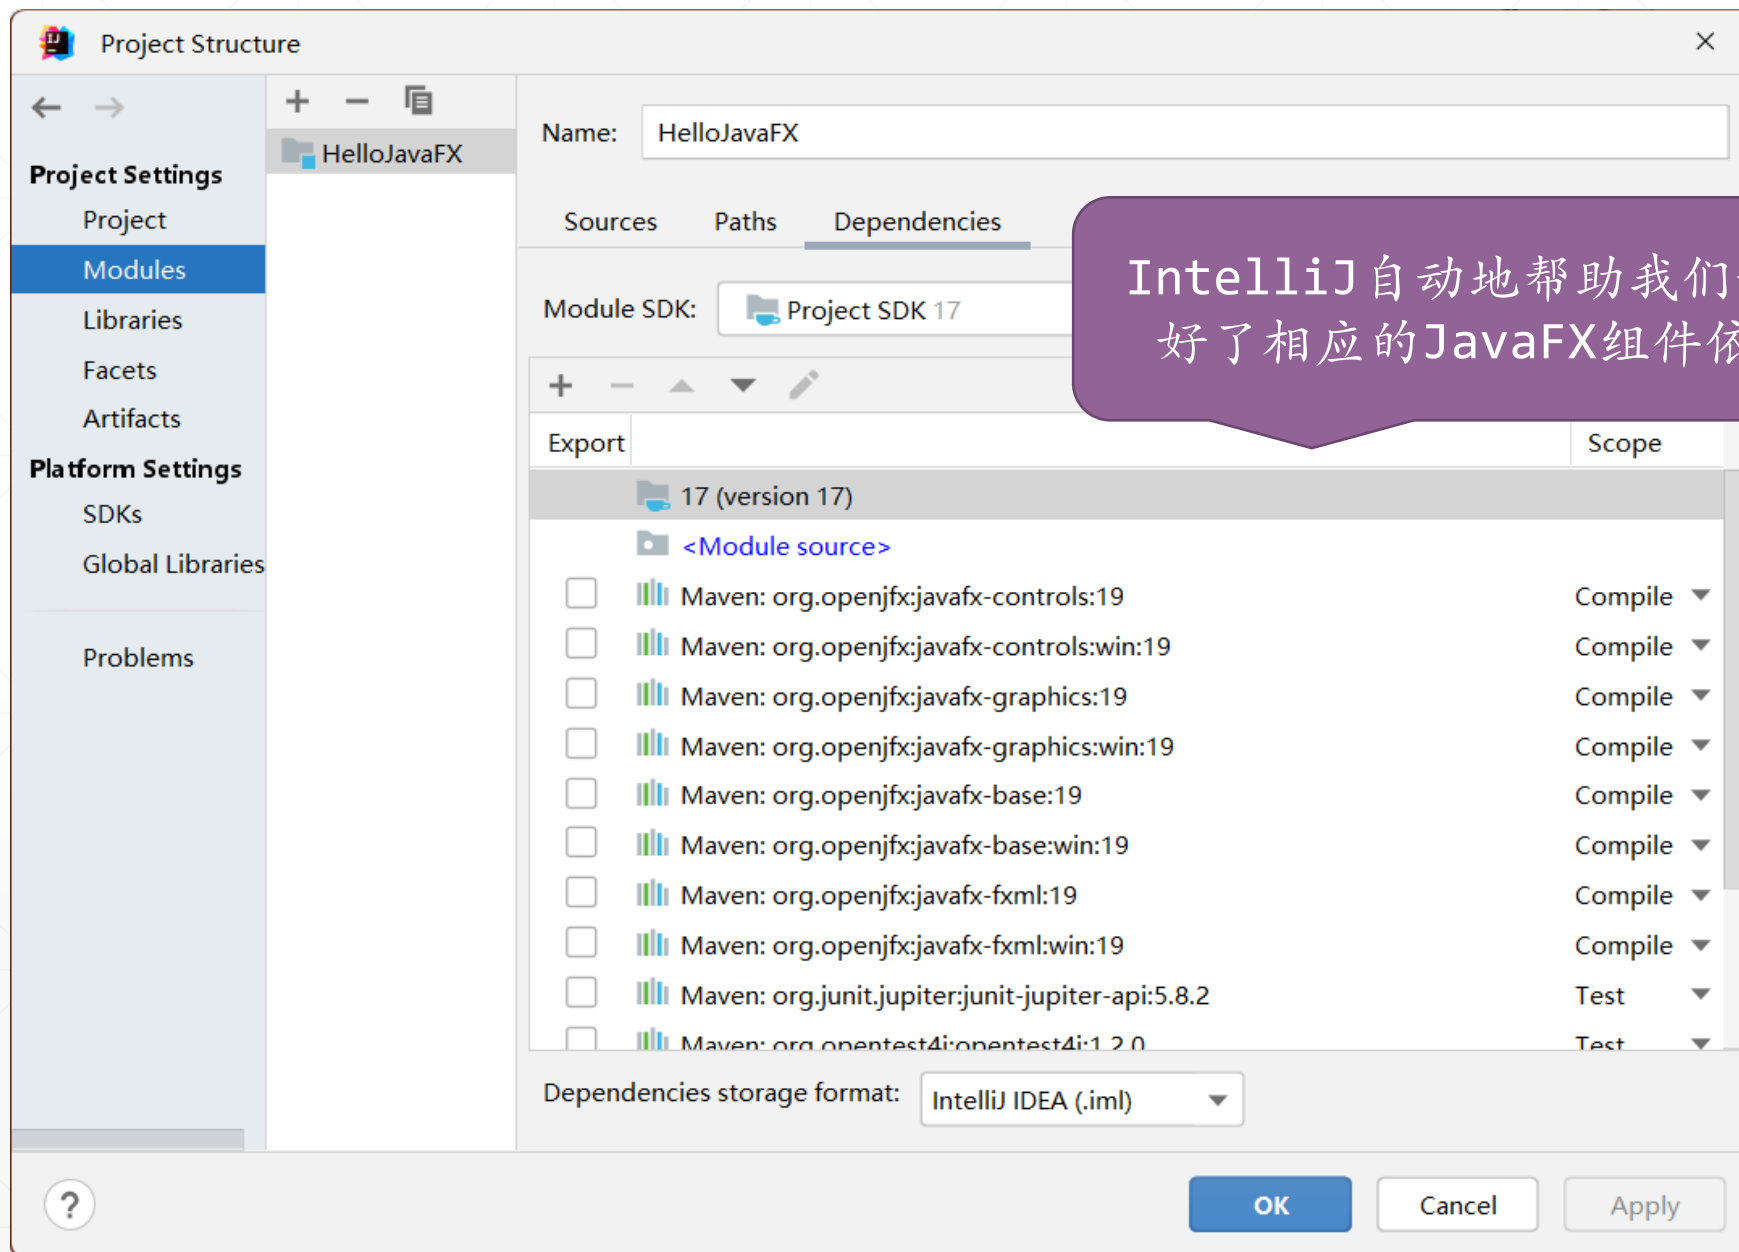

本课程示例基于JavaFX SDK 19，可运行于JDK 17或19之上。

Background Tasks

Downloading Maven plugins...

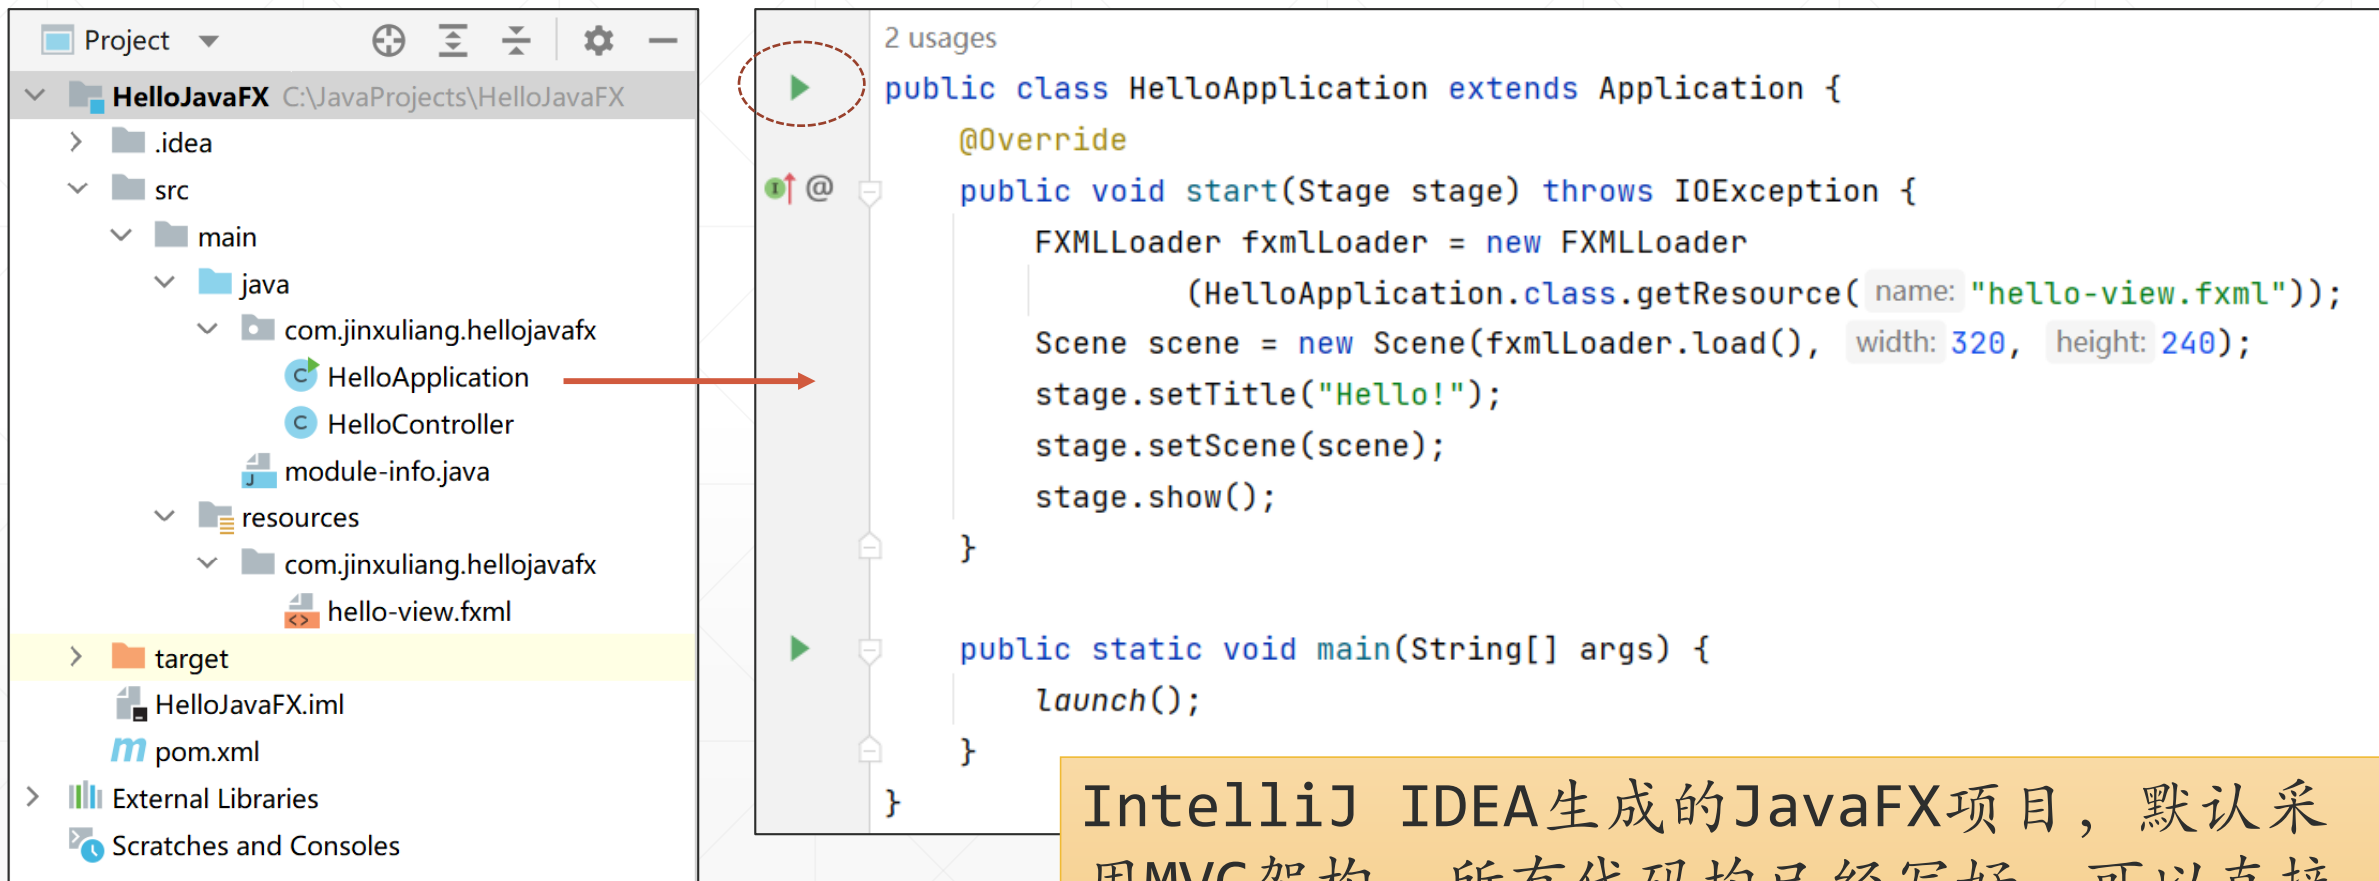

Downloading plugins for HelloJavaFX...

commons-parent-35.pom [<https://repo.maven.apache.org/maven2/>]

IntelliJ生成的JavaFX项目框架

打开HelloApplicatin文件，点击左侧绿色三角，可以运行此JavaFX程序：

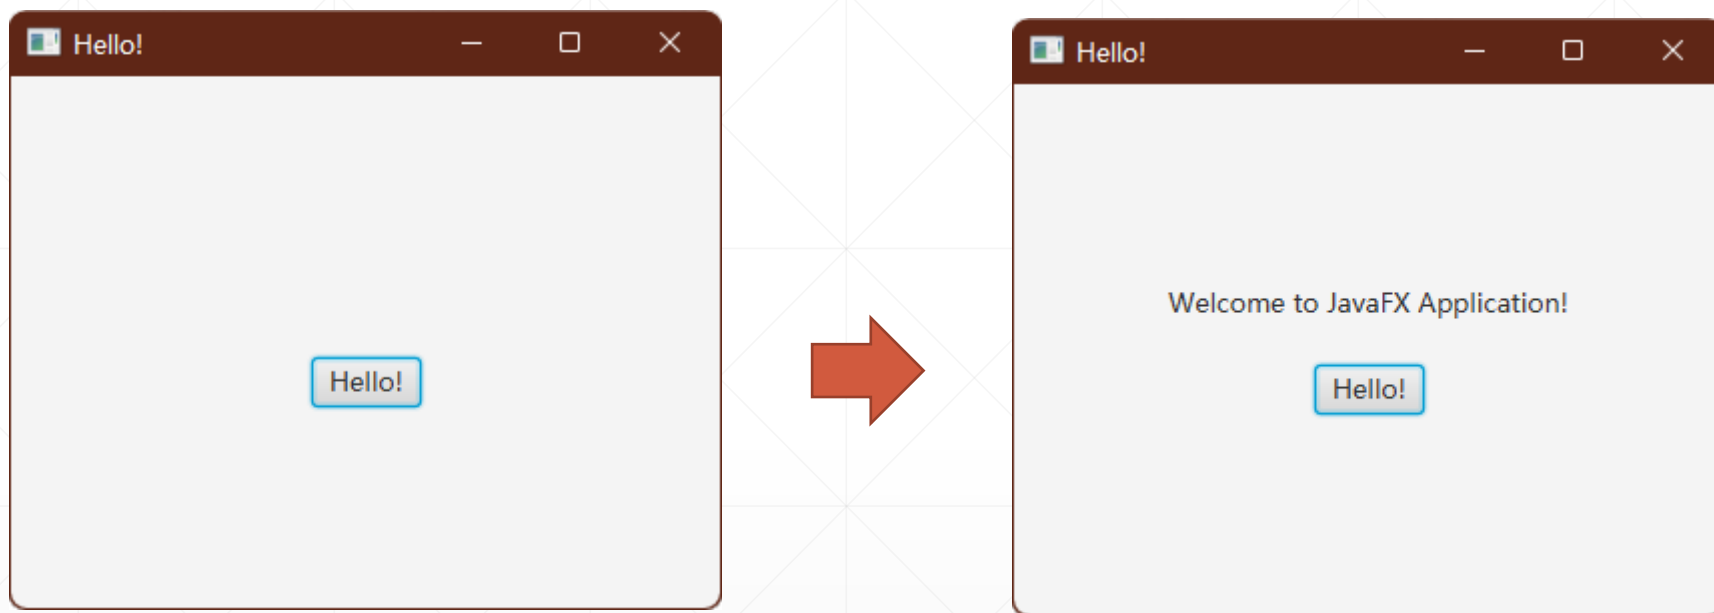

```
2 usages
public class HelloApplication extends Application {
    @Override
    public void start(Stage stage) throws IOException {
        FXMLLoader fxmlLoader = new FXMLLoader
            (HelloApplication.class.getResource(name: "hello-view.fxml"));
        Scene scene = new Scene(fxmlLoader.load(), width: 320, height: 240);
        stage.setTitle("Hello!");
        stage.setScene(scene);
        stage.show();
    }

    public static void main(String[] args) {
        launch();
    }
}
```

IntelliJ IDEA生成的JavaFX项目，默认采用MVC架构，所有代码均已经写好，可以直接编译和运行。

示例运行截图

这个是IntelliJ IDEA为JavaFX生成的模板项目，后面会介绍如何在此项目基础上编写自己的代码和定制UI界面。
